intelligent heat

## Vagn on HWAM

Having a HWAM in your home means more than just heating from an unusually elegant piece of furniture.

The light of the fire and the crackle of the flames make us feel at home and in touch with our innermost selves, while working with the firewood is a simple joy which brings the most fundamental satisfaction to our human nature.

The daily rhythm, from lighting-up and until the dying glow of the embers, becomes a fixture in our universe, making our everyday lives feel secure and reminding us that we need to belong.

Warmest regards Vagn Hvam Pedersen

## Form and function

All models from HWAM are designed by leading Scandinavian architects. For decades, co-operating with modern, bold-minded designers has been a natural part of our development process.

The architect's vision and influence ensure that design and function go hand in hand and that care is taken to ensure the best possible interaction between our product models and the architecture in which they are placed.

There are no ornaments or other superfluous details on a HWAM product. All design elements play an important functional role in the daily use.

#### **Strand + Hvass**

“Together with HWAM, we create untraditional designs based on the character of the fire and the pyramidal shape of the flames. It is not just about making a functional piece of heating furniture, but also about creating an appealing sculpture in the room with an architectural design which is interesting in itself.”

In 2006, HWAM Heat Design AS won the reddot award for HWAM 3320, designed by Strand + Hvass.

#### **Aarhus Arkitekterne & SMT design**

“In HWAM, we have a partner who dares to play along the great lines of imagination and who is willing to go the full length in terms of quality. At HWAM, the word ‘compromise’ is an unfamiliar term, which makes them fun to play with.”

In 2002, HWAM Heat Design AS won the reddot award for HWAM WALL, designed by Aarhus Arkitekterne & SMT design.

#### **Sørig & Jacobsen**

“Our development work with HWAM is very much based on the graphical and sculptural design. It is important for the design to be beautiful – whether from a distance or close up. We therefore try to give the stove the characteristics of a fine piece of furniture. The product must be characterised by a finish known from some of the greatest classics in furniture design, and it must offer an aesthetic pleasure throughout.”

#### **Anders C. FASTERHOLT**

“To me, the most important thing is the function. I have always said: – Function first, then the design will follow automatically. Designing just for design’s sake is not my style – nor HWAM’s for that matter.”

*Automagic*

Hidden inside a HWAM you will find a little object that you are unlikely to ever actually see. It is nothing more than a simple heat-sensitive metal spring which expands or contracts depending on the temperature.

This little spring is the heart of an efficient and user-friendly combustion system: The HWAM automatic system. As the only products on the market, all wood-burning stoves from HWAM Heat Design are born with the patented HWAM Automatic system. The efficiency of the automatic system has been documented numerous times, and even if the principle is quite simple, it affects every aspect by which we measure and assess wood-burning stoves.

### **Operation and cleaning**

The automatic system optimises the combustion so you do not have to constantly adjust or monitor your HWAM stove during daily use. All you have to do is light up and enjoy the flames and the heat. When you add more firewood, the system will automatically readjust the stove for optimum combustion. Furthermore, the optimised combustion reduces the amount of ashes and soot to facilitate cleaning.

### **Energy and economy**

The automatic system ensures optimum utilisation of the firewood. The improved energy efficiency has been documented repeatedly. Overall, you can expect an improvement of 20-30% compared to conventional combustion systems.

### **Minimum environmental load**

Purer combustion reduces the strain on the environment. Both in terms of reduced consumption of resources, but also in terms of reduced smoke and particles.

### **Tested and documented**

The patented HWAM automatic system has been tested and documented in numerous tests carried out at test centres all over Europe. Tests and documentation are available under "Download/Approvals" at [www.hwam.com](http://www.hwam.com).

# ишат 44IO

The door slides up along the front in one smooth movement.  
The image of the flames is clear and distinct.  
A burning fire, hanging on the wall  
– and visible from all positions in the room.

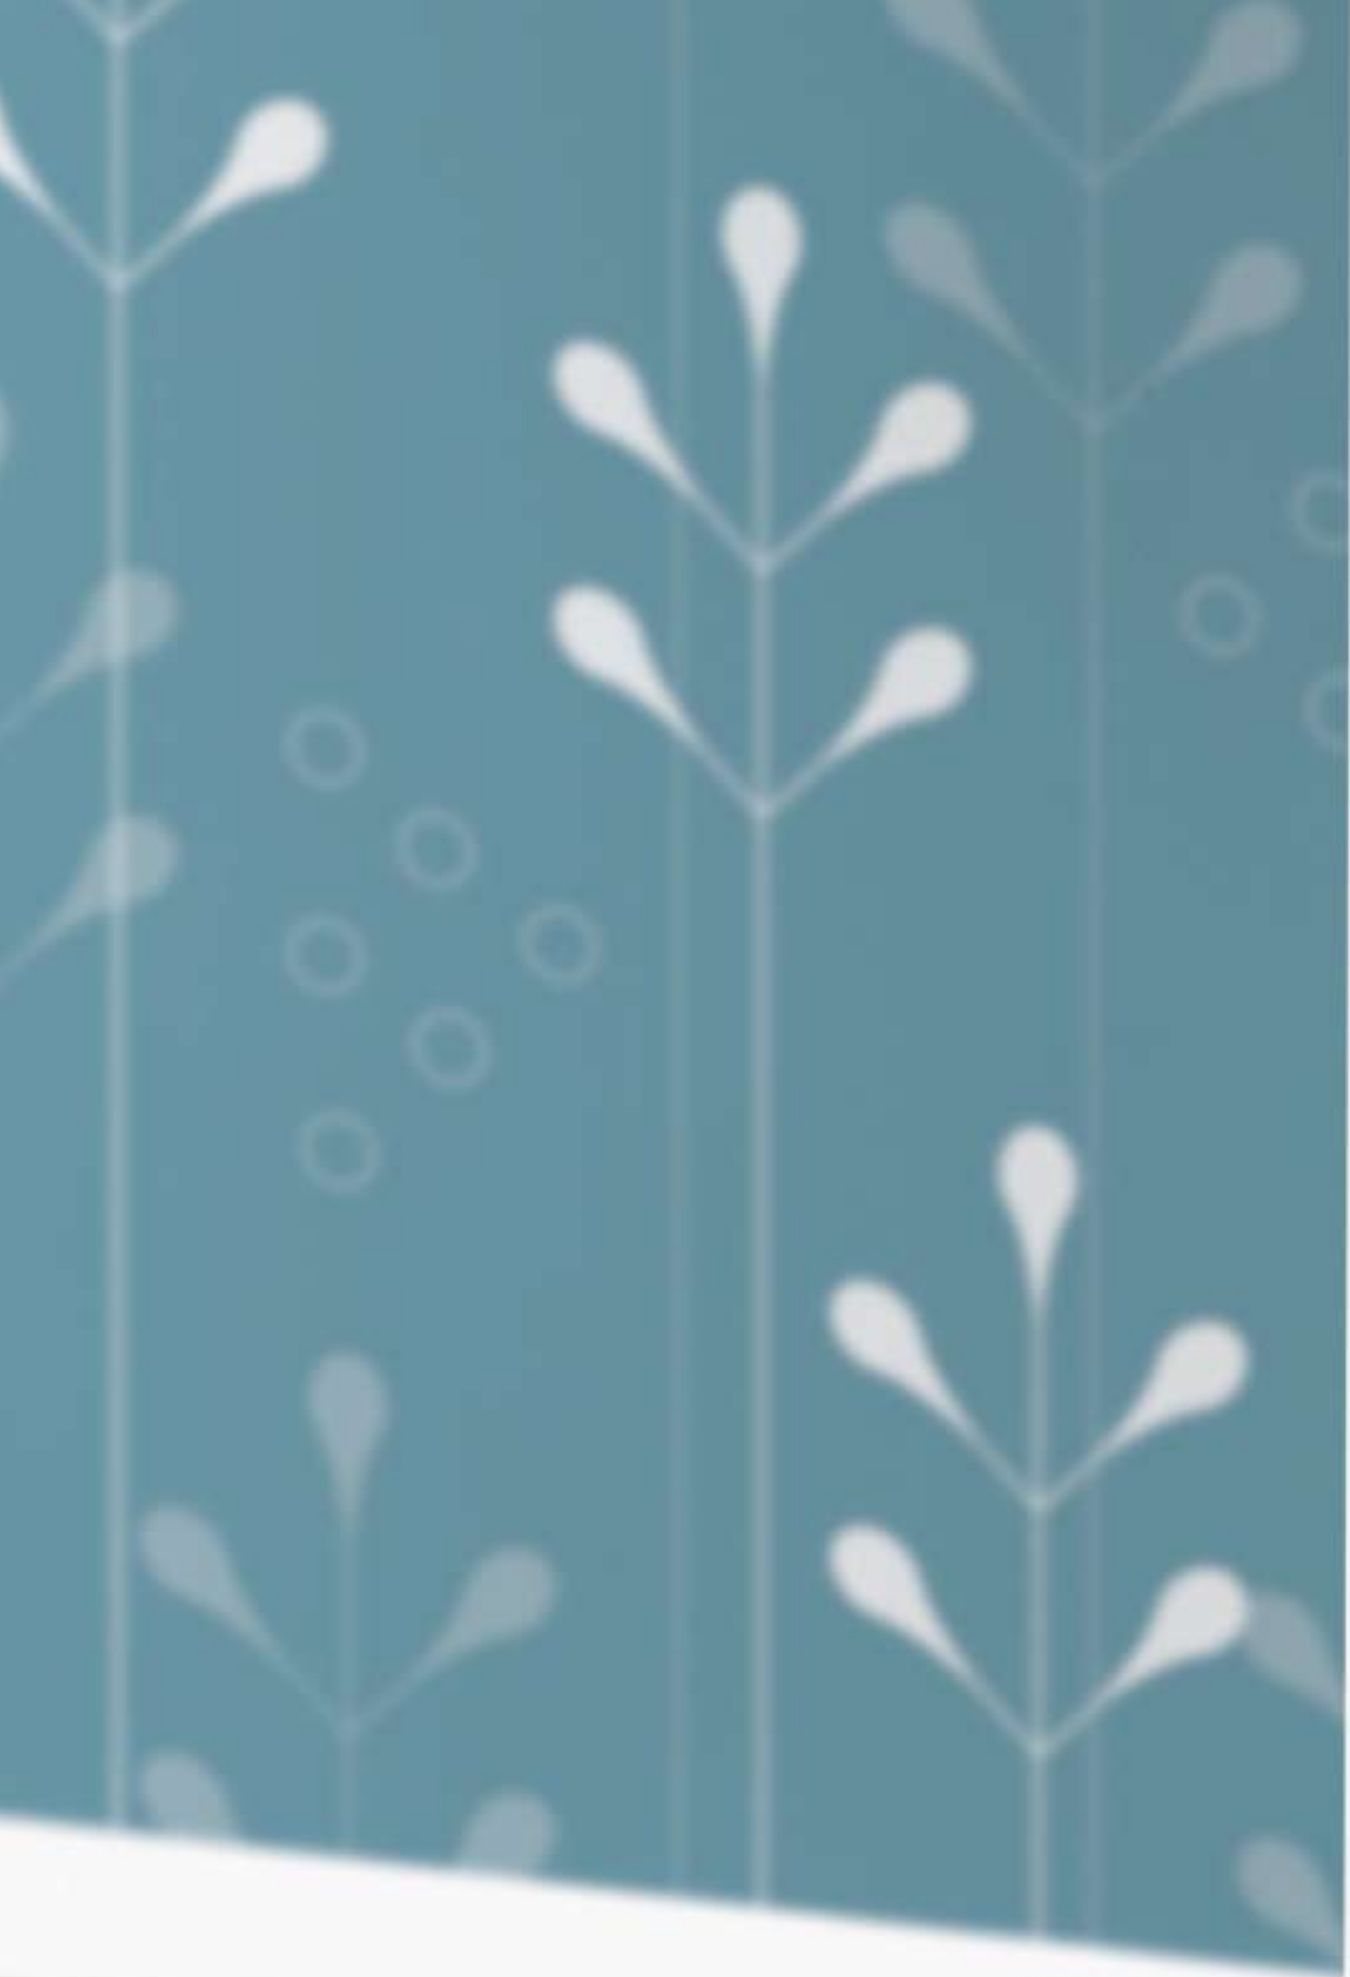

*“The HWAM 4410 has its own architecture within the home architecture.  
It creates an interesting focal point in the room  
– whether it is being used or not.”*

Christina Strand

hwam

The visual shape and energetic process of the fire create a wide foundation, converging and rising like a pyramid in the room.

3320

ишам  
3320

hwam

3310

The flames are clearly visible and when seen through the large pane,  
they seem to be floating in thin air.

Sharp meets smooth.  
The heat spreads from an elegant piece of furniture.

*These stoves move the boundaries* of modern fire heating design.

The design is a synthesis of aesthetics and functionalism,  
and even if each individual model is unorthodox and innovative,  
they all come with the well-known,  
uncompromising HWAM technology and finish.

*HWAM WALL* attracts the attention  
like the magnet attracts the metal.

A format which almost demands an untraditional placement.

A remote-controlled, floating  
lightness challenging the eye and the expectation.

HWAM WALL is available with or without the stylish screen.

“You feel at peace

as you gaze into the fire.”

Niels Hvass

# hwam I 20/80

Fireplace insert with HWAM's automatic combustion system and style elements from HWAM Figaro, that can be adapted to most fireplaces.

hwam

# *Figaro*

A standing invitation to everyone who wants to sit around the fire.  
Lean back, smiling and with a charisma reaching into the farthest corners  
of the room.

*Rounded, friendly shapes.* Minimalist design in which all elements serve a function. The point of departure for the stoves is the modern Scandinavian design tradition. An accommodating, democratic style which is unusually easy to integrate in the décor and a pleasure to use every single day.

НШам *Mozart*

An attractive finish, pleasing to your eyes and hands.  
A complete 360-degree design tempting you to place it in the  
middle of the room as a sort of centre of events.

# ишам Monet

Classic, Scandinavian lines in a friendly, open design. Flexible enough to allow you to create variation by means of accessories. Stable enough to stay in style for years.

Available with top plates of soapstone, granite or sandstone.

нишат

# *Ravel*

An elegant, compact shape with a broad view of the flame chamber.  
The elliptical shape lets the sharp meet the round, giving you the freedom  
to place it wherever you like.

hwam

# *Vivaldi*

Compact and uncompromising – for homes with the same combination.  
A highly visible combustion chamber expands the experience far beyond  
the confines of the physical dimensions.

ншам

# *Beethoven H* with soapstone

A round, soft shape with a thick jacket which captures the heat and releases it gently.  
A fixture in the universe which slowly but steadily spreads well-being throughout the room.

*The best Danish design traditions* from the 1950s and sophisticated modern combustion technology come together in complete harmony in our classic models. Though near-epitomes of nostalgia, the stoves are, nevertheless, easy to integrate and live happily with.

ншам

# *Classic 4*

Some things are better left unchanged.  
Such as the smell of freshly-baked bread and a pot of hot tea in the evening.  
This is our monumental tribute to tradition.

hwam

# *Classic 7H*

Even if time seems to stand still when you are looking into the flames, the HWAM Classic 7H is just as up-to-date, technically, as our latest models.

A monumental, Scandinavian design which makes all the generations of the family feel at ease.

hwam

# *Classic 10/50*

Fireplace insert with HWAM's automatic combustion system and style elements from the HWAM Classic models.  
Can be adapted to most fireplaces.

**HWAM Firewood bucket**  
Available in black and grey.

**HWAM WALL fireplace accessories**  
The set comprises a poker, a shovel and a brush.  
Available in black and grey, handles are made of stainless steel.

**HWAM WALL firewood bed**  
Available in stainless steel.

# hwam accessories

**HWAM brush set and poker**

The set is supplied with an elegant wall fitting.  
A poker is also available.

**HWAM firewood box on wheels**

Available in black and grey.

**HWAM fireplace accessories**

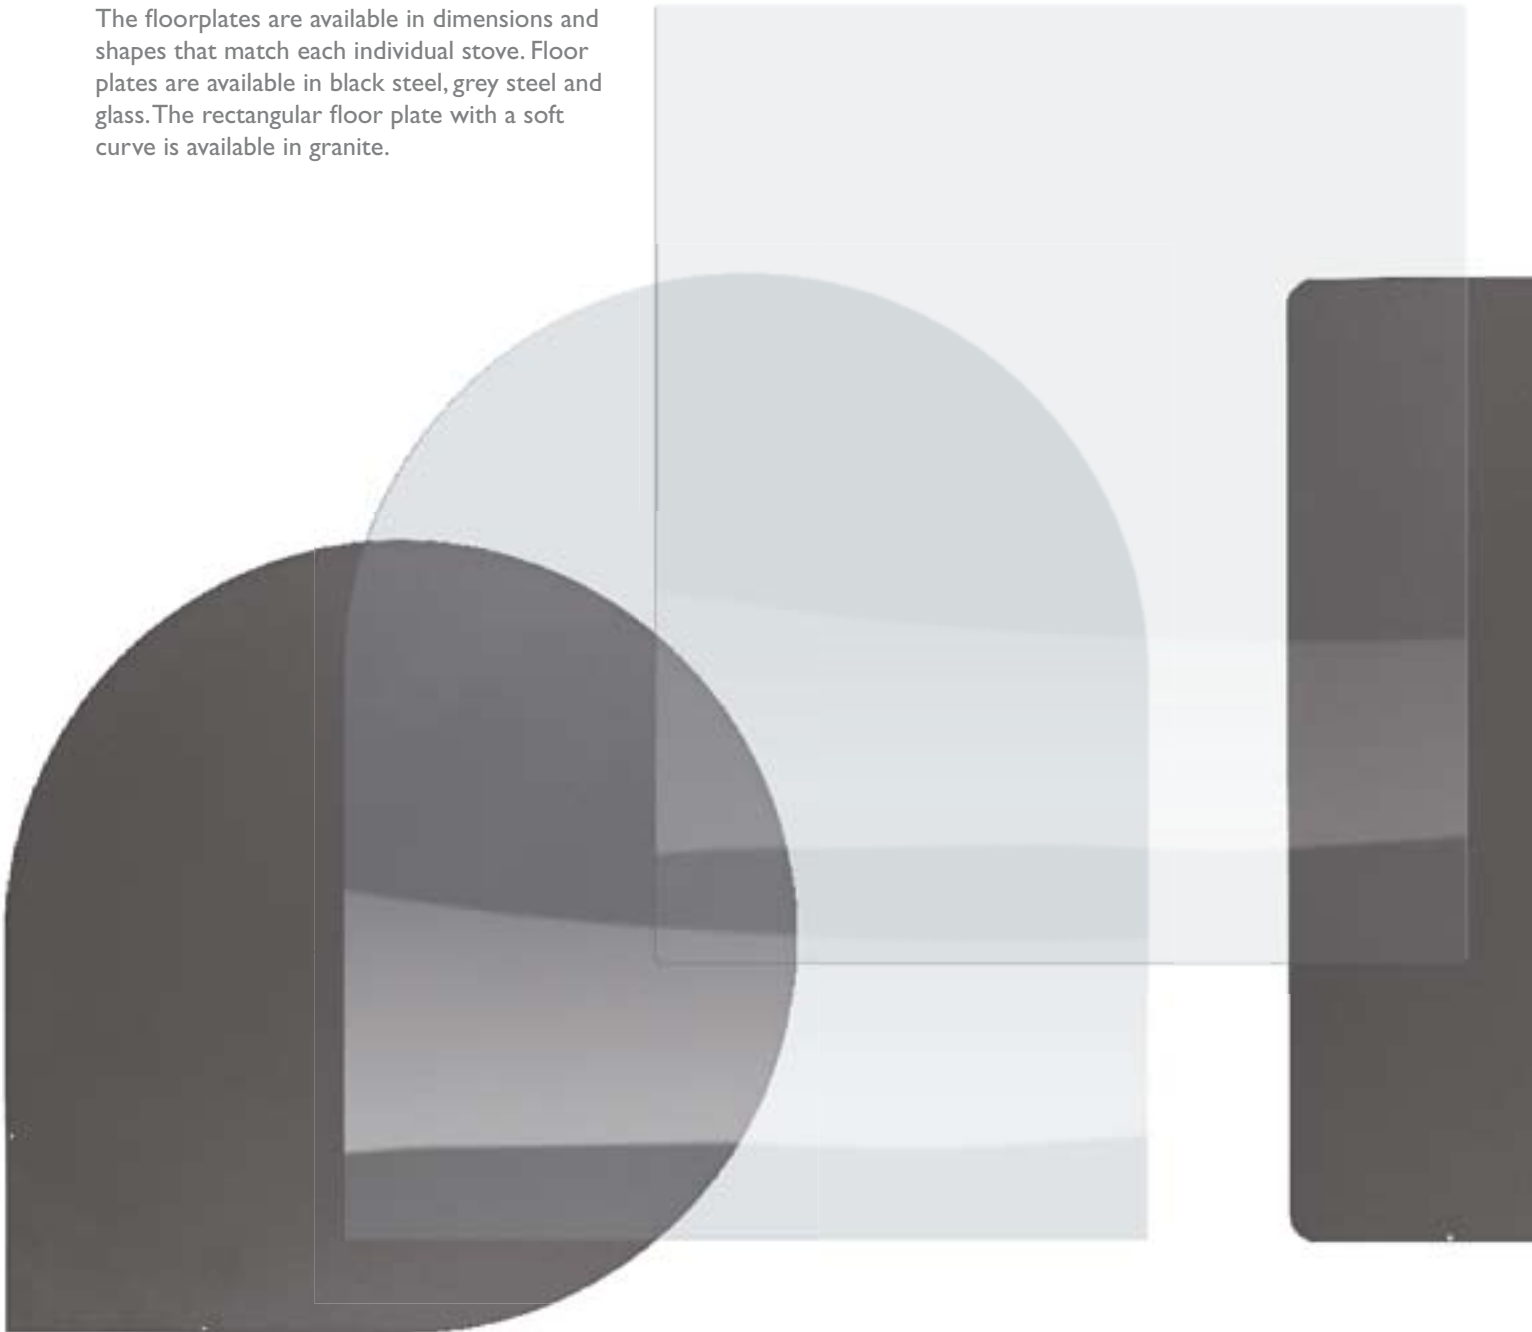

Comprises a poker, a brush and a shovel.  
Available in black, black with handles of stainless steel,  
grey, and grey with handles of stainless steel.

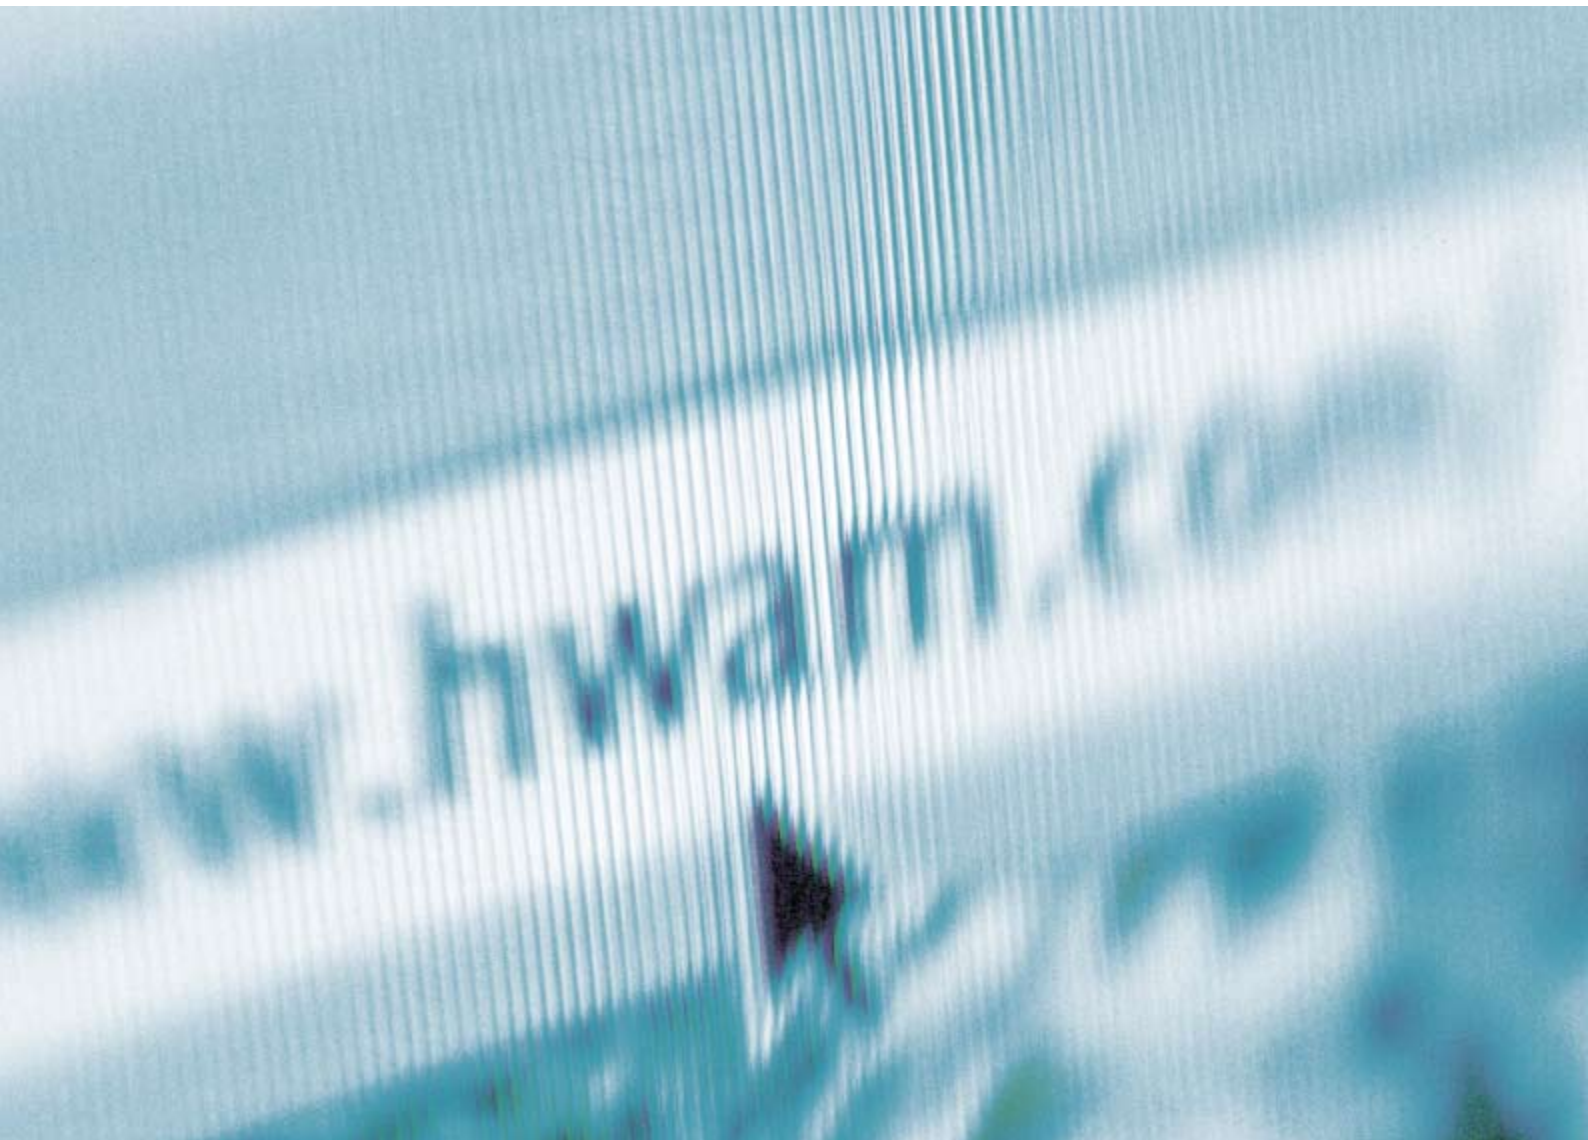

# ншам floor plates

The floorplates are available in dimensions and shapes that match each individual stove. Floor plates are available in black steel, grey steel and glass. The rectangular floor plate with a soft curve is available in granite.
